Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 14819-2 was prepared by the European Committee for Standardization (CEN) in collaboration with Technical Committee ISO/TC 204, *Intelligent transport systems*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

Throughout the text of this document, read “...this European Standard...” to mean “...this International Standard...”.

ISO 14819 consists of the following parts, under the general title *Traffic and Traveller Information (TTI) — TTI messages via traffic message coding*:

- *Part 1: Coding protocol for Radio Data System — Traffic Message Channel (RDS-TMC) using ALERT-C*
- *Part 2: Event and information codes for Radio Data System — Traffic Message Channel (RDS-TMC)*
- *Part 3: Location referencing for ALERT-C*

Foreword

The text of the International Standard from Technical Committee ISO/TC 204 "Intelligent transport systems" of the International Organization for Standardization (ISO) a European Standard by Technical Committee CEN/TC 278, "Road transport and traffic telematics", the secretariat of which is held by NEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2003, and conflicting national standards shall be withdrawn at the latest by November 2003.

This document supersedes ENV 12313-2:1997.

This document has to be implemented at national level, either by publication of an identical text or by endorsement, by November 2003, and conflicting national standards have to be withdrawn by November 2003.

Attention is drawn to the fact that there may be Intellectual Property Rights (IPR) in relation to certain provisions of this standard, especially in regard to the implementation of terminal products. The technical experts of TC 278 were unable to identify such claims due to the complicated legal issues involved. IPR holders should notify CEN of their claims.

No known national standards (identical or conflicting) exist on this subject.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovak Republic, Spain, Sweden, Switzerland and the United Kingdom.

Introduction

EN ISO 14819-2 is the second part of the EN 12313 / EN ISO 14819 series of standards, covering the so-called 'ALERT-C' protocol encoded for transmission into the RDS-TMC feature. Therefore, this standard must uniquely and solely be considered together with EN ISO 14819-1, for a complete understanding.

EN ISO 14819-1 fully describes the ALERT-C protocol concept and relationship with the RDS standard, IEC 62106:2000

In this version of EN ISO 14819-2, the content and the structure of the 'Events List' have not been altered, but recent work from the FORCE/ECORTIS Projects regarding translations and a number of improved formatting ideas suggested by the EPISODE Project, have been introduced. Additionally mention is made of suggested 'Event List' sub-sets.

In particular, this part contains the *special meta-language*, in the so-called 'CEN-English', which the technical experts of CEN TC 278 agreed would be the only and sole source for all coded descriptions used in RDS-TMC. This methodology has allowed agreement in important details for the many hundreds of event phrases, so included, even though subtle linguistic differences were perceived and need to be allowed for in terms of end-user presentation. Thus the French and German language editions of this standard have the same form as this English language edition. All three language editions have *exactly the same* sections 3.1.3 Event List, 3.2.2 Supplementary Information List and 3.3.2 Forecast Event List written in 'CEN-English'. Each language edition comprises Informative annexes providing those lists again in three or four column format showing the 'CEN-English' description and the 'transformed' language (not necessarily a direct literal translation, but a comprehensible transformation of the specific intent of the 'CEN-English') description in their respective languages.

Translations into further other languages, based upon the normative 'CEN-English' have been produced and are available from the TMC Forum web site, at URL: www.tmcforum.com.

Further work has been undertaken by the FORCE/ECORTIS Projects to define subsets of the Events List covering safety and crisis phrases, which are now embodied in the SACEL and SACEL + Events Lists, which can also be found on the TMC Forum web site, at URL: www.tmcforum.com

1 Scope

EN ISO 14819-1 describes the ALERT-C protocol concept and message structure used to achieve densely coded messages to be carried in the RDS-TMC feature. This part (2) of the EN ISO 14819 series of standards defines the 'Events List' to be used in coding those messages.

2 Normative references

This European Stanadard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Stanadard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

EN ISO 14819-1	Traffic and Traveller Information (TTI) - TTI Messages via Traffic Message Coding -Part 1: Coding Protocol for Radio Data System - Traffic Message Channel (RDS-TMC) - RDS-TMC using ALERT-C
IEC 62106:2000	Specification of the radio data system (RDS) for VHF/FM sound broadcasting in the frequency range from 87,5 to 108,0 MHz
ENV 13106:2000	Road transport and traffic telematics - DATEX traffic and travel data dictionary (version 3.1.a)

3 Event and Information codes for Traffic Message Channel

3.1 Event list

3.1.1 Explanatory notes

- 1) The event list is divided into update classes, indicated by the various sections. These update classes are used for terminal message management, as indicated in Section 6.1 of EN ISO 14819-1. The event list is shown in the format of a database.

NOTE: The first column shows line numbers to assist reading of the database

- 2) The second column gives a 'technical language' (so-called CEN-English) description of the event code, of which the code is shown in the third field. Appropriate authorities of each country have been responsible for the exact descriptions in other languages, in conformity with the definitions given in the DATEX Data Dictionary.

This will ensure precise definitions and use of the event codes in the transmission layer. Individual terminal implementations may handle these (translated) descriptions with some flexibility. To allow a more effective presentation however without altering the meaning.

- 3) The third column gives the decimal equivalent of the actual binary event code to be transmitted (see Section 5.3.2 of EN ISO 14819-1). These codes are purely internal to the RDS-TMC system and should not be used for referencing events or composing messages in other operator systems. Undefined codes are reserved for future system additions.

- 4) The fourth column, headed "N", is the nature of the event. The general meaning of the codes is as follows:

(blank)	-	information
F	-	forecast
S	-	silent: no message shall be presented to the end-user

- 5) The fifth column, "Q", is the optional quantifier field, containing the reference numbers of quantifiers listed in the table at the end of the event list. The position of the optional quantifier in the event, plus in some cases some accompanying words, is shown by (...Q...) within the text. Use of these optional quantifiers is described in Section 5.5.6 of EN ISO 14819-1.

- 6) The sixth column "T" is the duration type. "D" indicates "dynamic" events of short duration and "L" indicates longer-lasting events (see Section 5.4.10 of EN ISO 14819-1). If this code is bracketed (), or if the time-of-day quantifier (no.7) is actually used in the message, no duration shall be presented to the user. In these cases, the duration indicates persistence, used for message management only.

- 7) The seventh column "D" is the default directionality of the event. "1" indicates that one direction, and "2" that both directions of traffic are normally affected by the event. TMC terminals can use this field to help determine which events to present to the driver and how.

- 8) The eighth column "U" is the default terminal urgency, with values "X" for extremely urgent, "U" for urgent, and blank for normal events (see Section 5.4.5 of EN ISO 14819-1).

- 9) The ninth column, "C", gives a numerical representation of the update class the event belongs to. Only update classes 1 - 31 can be found in 3.1. Some update classes (classes 32-39 in the present list), which are exclusively for events with nature F and duration type L or (L), can be found in Section 3.2. They contain no events of another type (except S).

- 10) The final column, "R", gives phrase codes (references) for use by TMC operators. An event may be a single phrase event, or a combination of two or more phrases. Each phrase is allocated a phrase code consisting at least of a single code letter (A - Z) and a code number (1 - 999). Single phrase events are indicated by a single code letter and number of one or two digits (e.g. A1 - A99); expected events are indicated by the normal phrase code followed by "E" (e.g. A1E), and dangerous events by a following "D" (e.g. G6D); events with quantifiers can have three digits (e.g. A101). Longer lasting forecasts are indicated by the letter F.

- 11) Not all the messages have to be used by a Service Provider but it is the Service Provider's prerogative to choose the most suitable ones for the service being provided. However a Service provider would be well advised to take account and match the sub-set of messages with the messages able to be presented in the terminal.

The Event List also contains several predefined combinations of single phrase events to make better use of the available channel capacity. These combined events are indicated by the combined codes of the constituent phrases (e.g. B11.C1).

NOTE: The phrases used in combined events are not always word for word identical to the corresponding phrases used in the single events. Binding words or small changes to the wording are necessary.

The code letters are not related to the update classes, but have the following meaning:

- A: Level of Service
- B: Incidents/Accidents
- C: Closures
- D: Lane Restrictions
- E: Roadworks
- F: Obstruction Hazards
- G: Road Conditions
- H: Weather
- J: Winds
- L: Environment
- M: Temperature
- P: Activities
- Q: Delays/Cancellations
- R: Dangerous Vehicles
- S: Exceptional Loads
- T: Traffic Equipment Status
- U: Traffic Regulations
- X: Parking
- Y: Information

The code letter Z is used to indicate phrases from the List of Supplementary Information (see Section 3.2).

The phrase codes are not normative, but are only given as additional information about the contents of a given event and should be helpful when implementing software.

3.1.2 List of Quantifiers

Table 1 — List of quantifiers

No	Meaning	Range	Examples
0	n (small number)	(n = 1, 2,..., 28; 30, 32, ...36);	1 00001, 2 00010
1	N (number)	(N = 1, 2, 3, 4; 10, 20, ... 100; 150, 200,... 1000)	1 00001, 2 00010 10 00101, 20 00110 150 01111, 200 10000
2	less than V metres	(V = 10, 20,... 300)	10 00001, 20 00010
3	P percent	(P = 0, 5,... 100)	0 00001, 5 00010
4	of up to S km/h	(S = 5, 10,... 160)	5 00001, 10 00010
5	of up to M minutes (H hours)	(M = 5, 10,... 50; H = 1, 2,... 12; 18, 24,... 72)	5 00001, 10 00010 1 01011, 2 01100 18 10111, 24 11000
6	T degrees Celsius	(T = -50, -49,... +50)	-50 0000 0001, -49 0000 0010
7	H time	(H = 00.00, 00.10,... 23.50)	00.00 0000 0001 00.10 0000 0010
8	W tonnes	(W = 0.1, 0.2,... 10.0; 10.5, 11.0,... 60.0)	0.1 0000 0001, 0.2 0000 0010 10.5 0110 0101 11.0 0110 0110
9	L metres	(L = 0.1, 0.2,... 10.0; 10.5, 11.0,... 80.0)	0.1 0000 0001, 0.2 0000 0010 10.5 0110 0101 11.0 0110 0110
10	of up to D millimetres	(D = 1, 2,... 255)	1 0000 0001, 2 0000 0010
11	M MHz	(as defined in EN 50067: 1998)	87.6 0000 0001 87.7 0000 0010
12	k kHz	(as defined in EN 50067: 1998)	ITU Regions 1,3 (Region 2) 0000 0001 153 (reserved) 0000 0010 162 (reserved) 0001 0000 531 (531) 0001 0001 540 (541)

Quantifiers 0 to 5 use a 5-bit data field, and 6 to 12 an 8-bit data field. The first value above is indicated in the quantifier by binary "1", the second by "10", etc. Where all possible values have been utilised, binary "0" indicates the highest.

3.1.3 Event list

NOTE: The first column shows line numbers to assist reading of the database

Table 2 — Event list

Line	Text (CEN-English, see Explanatory notes)	Code	N	Q	T	D	U	C	R
1	EVENT LIST								
2									
3	1. LEVEL OF SERVICE								
4									
5	traffic problem	1			D	1	U	1	A50

3.2 Supplementary information

3.2.1 Explanatory notes

One or more pieces of information can be appended to any message within the standard Event List, using codes contained within a second or subsequent RDS-TMC group (i.e.: Label 6 plus an 8-bit data field).

The list of supplementary information is shown in the form of a database:

- The first column shows line numbers to assist easy reading of the database only.
- The second column is the information phrase. Terminals which present messages in a verbal form should insert the supplementary information phrase in accordance with the order of the codes in the sequence of additional information (see Section 5.5.2 of EN ISO 14819-1). In most cases this means insertion after the basic event description.
- The third column gives the decimal equivalent of the actual binary data code to be transmitted as the supplementary information, following the appropriate 4-bit label (see Section 5.5.2 of EN ISO 14819-1).

The information phrases are grouped under several headings. These headings are for easier reading only, are not normative and have no actual functionality as far as RDS-TMC is concerned.

3.3 Forecast event list

3.3.1 Explanatory notes

1. This forecast event list is divided into update classes, indicated by the various sections. These update classes are used for terminal message management, as indicated in Section 6.4 of EN ISO 14819-1. This forecast event list expands the event list as given in 3.1, and it is shown in the same format. Its main use will be to give pre-trip information, and it will probably be implemented only in home terminals.
2. All events shown in this forecast event list are of nature F and duration type L or (L), and are grouped into update classes 32-39 in the present list. They contain no events of another type (except S).
3. These additional forecast update classes are mainly used to convey weather forecasts. It will allow detailed warnings of adverse conditions to be projected several days ahead. As the serious weather event gets closer, the level of detail to be conveyed can become greater. To make best use of these messages, and to avoid any incompatibilities with terminals not implementing the forecast message list, it is necessary to introduce some additional rules.

These additional rules are:

- a) No mixed messages (i.e., messages containing events from the update classes 1-31 and events from the update class 32 - 39) are allowed.
- b) The use of label 1, control code 3, is not allowed with events from the forecast event list.
- c) The infrastructure has to ensure, that any forecast event changing into an dynamic event is handled by first deleting the forecast event and than creating an appropriate event of update class 1 - 31.
4. Any implementation of this Forecast Event List shall also implement a fifth rule for message updating, which will be additional/complementary to those already defined in the message management (as described in Section 6.4.3 of EN ISO 14819-1). In a terminal, an existing message is overwritten (or cancelled, see Section 6.4 of EN ISO 14819-1) on receipt of a message which:

Rule 1: has the same primary location, drawn from the same location table, as the existing one

AND

Rule 2: has the same value of the direction bit (see Section 5.4.6 of EN ISO 14819-1)

AND

Rule 3: contains an event that belongs to the same update class (see Event List) as the event in the existing message

AND

Rule 4: comes from the same TMC service (see Section 7.4.1 of EN ISO 14819-1) as the existing message

AND (if the event is from update class 32 or higher

Rule 5: has the same duration

28	55 miles	-	28	800	less than 280 m	-	85 mph	up to 48 hours
29	55 miles	-	30	850	less than 290 m	-	90 mph	up to 54 hours
30	60 miles	-	32	900	less than 300 m	-	95 mph	up to 60 hours

	Label 2	Label 3	Label 4	Label 4	Label 4	Label 4	Label 4	Label 4
			Quantifier 0	Quantifier 1	Quantifier 2	Quantifier 3	Quantifier 4	Quantifier 5
Code	Affected length	Speed limit	Small number	Numbers	Visibility	Probability	Speed	Time period
31	60 miles	-	34	950	-	-	95 mph	up to 66 hours
0 (=32)	> 60 miles	-	36	1000	-	0%	100 mph	up to 72 hours

NOTE 1: The values assigned to codes have been rounded to the nearest comprehensible, unit of measurement for native English speakers.

NOTE 2. Label 4 specifically uses the unit metre, which is now accepted as a normal, comprehensible, unit of measurement for 'short' distances among native English speakers.

Annex B (informative)

GB-English - Event List

The Events List that follows uses a similar layout as used in Section 3.1.3, with exactly the same first and second columns. The third (and fourth where used) column carries the 'transformed' event description in the language of this edition of the standard and allows for changes in syntax between singular and plural.

NOTE: The first column shows line numbers to assist reading of the database.
